1 Display an image to students.

The same image can be used for all students in a school/district on the same day. See below for examples.

![Image Examples]

2 Have students answer the following questions in their math journal.

- What do you see?
- What do you think?
- What do you wonder?

3 Students discuss their answers.

Extension

- Start your math block each day with a new image.
- Share student responses with colleagues.
- Have every student bring in an object or image. Then, students complete a gallery walk answering these questions for 3-5 images of their choice.
